Young Adults - Driving While Intoxicated

number and rate/10,000 arrests for young adults ages 16-21 years (2017)

Why This Matters:
The young adult arrest rate for driving while intoxicated (DWI) is defined as the number of arrests for driving while intoxicated per 10,000 young adults aged 16 through 21 in that county. The data shown are counts of fingerprinted arrests for drunk driving.

Community indicators are not direct measures of the population's behavior, but are instead measures of the performance of the community service systems that generate them. Indicator data produced by public service or social control agencies are affected by policy shifts, resource fluctuations, degree of centralization and standardization, local reporting practices and local service delivery differences.

The young adult arrest rate for driving while intoxicated is a direct measure of law enforcement response to underage drinking and drunk driving and is an indirect measure of young adult alcohol use in the population.
